

QA Doc

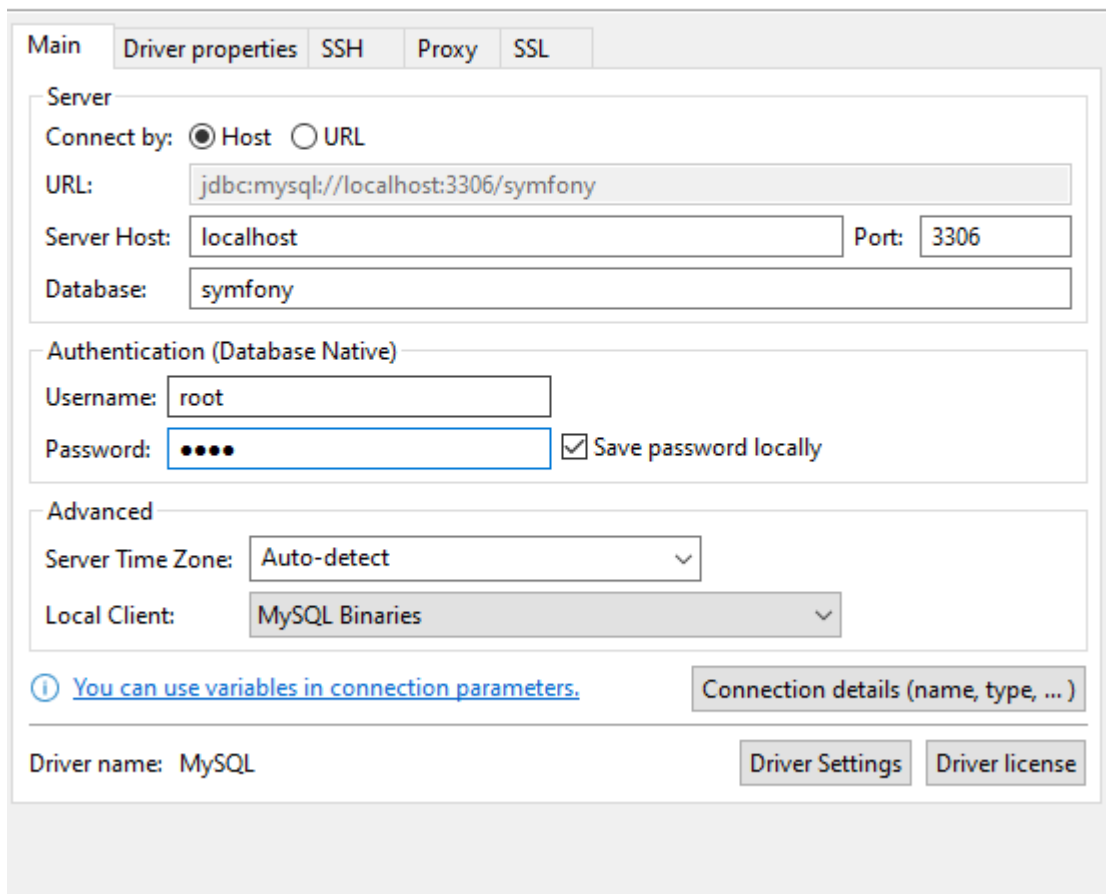

Purpose of this task was to create a scrapper that retrieves data from <https://rekvizitai.vz.lt/en/company-search/> based on a registration code.

In order to test this task, follow the given steps please –

- At first, we need to create database. I'm using DBeaver for DB connection. Here database is "symfony", user is "root" and password is also "root"

Connection Settings

MySQL connection settings

The screenshot shows the 'Main' tab of the 'MySQL connection settings' dialog in DBeaver. The 'Server' section has 'Connect by:' set to 'Host' (selected) and 'URL' set to 'jdbc:mysql://localhost:3306/symfony'. The 'Server Host' is 'localhost' and the 'Port' is '3306'. The 'Database' is 'symfony'. The 'Authentication (Database Native)' section has 'Username' set to 'root' and 'Password' set to four dots, with the 'Save password locally' checkbox checked. The 'Advanced' section has 'Server Time Zone' set to 'Auto-detect' and 'Local Client' set to 'MySQL Binaries'. At the bottom, there is a link 'You can use variables in connection parameters.', a 'Connection details (name, type, ...)' button, and 'Driver name: MySQL' with 'Driver Settings' and 'Driver license' buttons.

- Once done, move to project and run "make build". Make sure your docker desktop is running.

- Later on, run “make up”.

```
PS C:\Users\User\Desktop\Webcrawler> make up
[+] Running 5/0
- Container webcrawler-database-1 Running
- Container webcrawler-rabbitmq-1 Running
- Container webcrawler-redis-1 Running
- Container webcrawler-app-1 Running
- Container webcrawler-nginx-1 Running
make migrate
make[1]: Entering directory 'C:/Users/User/Desktop/Webcrawler'

[OK] Already at the latest version ("DoctrineMigrations\Version20230721204549")

make[1]: Leaving directory 'C:/Users/User/Desktop/Webcrawler'
PS C:\Users\User\Desktop\Webcrawler> 
```

- Now go to <http://localhost/company/details/>.
